

The year 2001 marks the centenary of Biometrika, one of the world's leading academic journals in statistical theory and methodology. In celebration of this, the book brings together two sets of papers from the journal. The first comprises seven specially commissioned articles (authors: D.R. Cox, A.C. Davison, Anthony C. Atkinson and R.A. Bailey, David Oakes, Peter Hall, T.M.F. Smith, and Howell Tong). These articles review the history of the journal and the most important contributions made by appearing in the journal in a number of important areas of statistical activity, including general theory and methodology, surveys and time series. In the process the papers describe the general development of statistical science during the twentieth century. The second group of ten papers are a selection of particularly seminal articles from the journal's first hundred years. The book opens with an introduction by the editors Professor D.M. Titterington and Sir David Cox. The book celebrates the centenary of Biometrika, one of the world's leading academic journals in statistical theory and methodology by collating two sets of papers from the journal. One set consists of seven articles that review the journal's contribution to statistical science; the other set contains ten seminal papers from the journal's first hundred years. The book opens with an introduction by the editors Professor D.M. Titterington and Sir David Cox.
