Advances in Dynamics and Control

Presenting research papers contributed by experts in dynamics and control, *Advances in Dynamics and Control* examines new ideas, reviews the latest results, and investigates emerging directions in the rapidly-growing field of aviation and aerospace. Exploring a wide range of topics, key areas discussed include: * rotorcraft dynamics * stabilization of unstable aircraft * spacecraft * satellite dynamics and control * missile auto-pilot and guidance design * hybrid systems dynamics and control * structural and acoustic modeling. Impeccably-researched and expertly-written, this text is a valuable reference for graduate students and scientific workers in universities and industry.
