

## Project Management Strategies for Predictable Results

Compendium of Larsen & Toubro 2nd Project Management Conclave, December 14, 2021, (e-Conclave)

The infrastructure sector is critical to India's overall development and is given high priority by the Indian government for initiating policies that would ensure time-bound creation of world class infrastructure in the country. L&T has demonstrated its resilience by completing critical projects during Covid-19 and winning mega projects in the face of stiff competition. In today's environment, "failure is not an option," and achieving predictable outcomes is critical for both business and project owners/clients. As the pressure to deliver construction/EPC projects increases in a difficult market and uncertain times, it is important to share best practises, discuss solutions openly, and innovate better ways to improve project profitability and further solidify L&T's reputation as the most dependable partner in achieving project results. In this context, L&T IPM hosted an E-Conclave on the theme "Project Management Strategies for Predictable Results (PMPR)" via Microsoft Teams on 14th December 2021. The Conclave theme, "PMPR," focused on accurately forecasting the outcome of a project early enough so that problems/issues can be identified in advance, as well as developing strategies for corrective actions to ensure committed project performance.
