

Multilevel Optimization: Algorithms and Applications

Researchers working with nonlinear programming often claim "the word is non linear" indicating that real applications require nonlinear modeling. The same is true for other areas such as multi-objective programming (there are always several goals in a real application), stochastic programming (all data is uncertain and therefore stochastic models should be used), and so forth. In this spirit we claim: The word is multilevel. In many decision processes there is a hierarchy of decision makers, and decisions are made at different levels in this hierarchy. One way to handle such hierarchies is to focus on one level and include other levels' behaviors as assumptions. Multilevel programming is the research area that focuses on the whole hierarchy structure. In terms of modeling, the constraint domain associated with a multilevel programming problem is implicitly determined by a series of optimization problems which must be solved in a predetermined sequence. If only two levels are considered, we have one leader (associated with the upper level) and one follower (associated with the lower level).

213,99 €

199,99 € (zzgl. MwSt.)

Lieferfrist: bis zu 10 Tage

Artikelnummer: 9781461379898

Medium: Buch

ISBN: 978-1-4613-7989-8

Verlag: Springer US

Erscheinungstermin: 17.09.2011

Sprache(n): Englisch

Auflage: 1998

Serie: Nonconvex Optimization and Its Applications

Produktform: Kartoniert

Gewicht: 655 g

Seiten: 386

Format (B x H): 160 x 240 mm
