Nanostructured Nonlinear Optical Materials

Studies of Clusters, Quantum Dots and Nanoparticles

This highly topical book focuses on novel features and applications of nanostructured nonlinear optical materials. It considers the applications of small-sized multiatomic species for optical limiting, Q-switching, and mode-locking, as well as laser-nanoplasma physics. It will be useful to a wide range of readers, including physicists, material scientists, and engineers interested in material science, plasma physics, laser technology, and spectroscopy.
