

Oxidative / Nitrosative Stress and Disease, Volume 1203

This volume features a discussion of recent advances related to the cellular and molecular mechanisms mediating the generation of reactive oxygen and nitrogen species and their role in the pathogenesis of human disease, with a particular focus on the respiratory and cardiovascular systems. The volume brings together contributions from basic and clinical scientists in the field with unique approaches and research efforts. The information presented may help facilitate future collaborative studies that will lead to new insights into the pathogenesis of cardiopulmonary diseases characterized by excessive oxidative and nitrosative stress and may suggest innovative directions for therapeutic intervention. NOTE: Annals volumes are available for sale as individual books or as a journal. For information on institutional journal subscriptions, please visit www.blackwellpublishing.com/nyas. ACADEMY MEMBERS: Please contact the New York Academy of Sciences directly to place your order (www.nyas.org). Members of the New York Academy of Science receive full-text access to the Annals online and discounts on print volumes.
