Multibody Dynamics 2019

Proceedings of the 9th ECCOMAS Thematic Conference on Multibody Dynamics

In this work, outstanding, recent developments in various disciplines, such as structural dynamics, multiphysics mechanics, computational mathematics, control theory, biomechanics, and computer science, are merged together in order to provide academicians and professionals with methods and tools for the virtual prototyping of complex mechanical systems. Each chapter of the work represents an important contribution to multibody dynamics, a discipline that plays a central role in the modelling, analysis, simulation and optimization of mechanical systems in a variety of fields and for a wide range of applications.
