Diabetes: from Research to Clinical Practice

Volume 4

Diabetes mellitus is a major public health problem affecting over 415 million people in the world. Extensive research over the decades and the recent discovery of new medicines have revolutionized our understanding and treatment of both type 2 diabetes and type 1 diabetes mellitus. This book contains selected topics that describe recent advances in research, and state of the art treatment of the two types of diabetes mellitus and their complications. The topics encompass epidemiology and pathogenesis of diabetes, clinical features, diagnosis and treatment of diabetes and related complications. The chapters contain essential background materials, as well as recent advances in researches in different aspects of diabetes mellitus. The book is expected to be useful for researchers, research students, as well as for the clinicians engaged in diabetes care and diabetes research.

This contributed volume discusses the most important aspects of diabetes in 27 selected chapters contributed by experts in the field. Its contents range from essential background information to recent advances, state-of-the-art treatments and in-depth discussions on many of the critical issues involved in diabetes pathophysiology and therapy. Throughout these pages, the most important areas of uncertainties and future directions of research have been outlined, covering a wide range of topics including latent immune diabetes, hypoglycemia, dietary recommendations, gestational diabetes and diabetes treatments, among others. This book is highly recommended for clinicians, researchers and students interested in diabetes care and research. ABOUT THE EDITOR Md. Shahidul Islam, M.D., Ph.D. is a Senior Consultant Physician at the Department of Emergency Care and Internal Medicine in the Uppsala University Hospital, Uppsala, Sweden; and an Associate Professor at the Department of Clinical Science and Research, Södersjukhuset, in the Karolinska Institutet, Stockholm, Sweden. Other books recently edited by the author include: Hypertension: from Basic Research to Clinical Practice, Thrombosis and Embolism: from Research to Clinical Practice, and Heart Failure: from Research to Clinical Practice.
