Atlas of Clinical Cases in Rhinoplasty

Volume I

This atlas discusses a variety of common through to complex clinical presentations in Rhinoplasty. Simple methods of handling different types of noses including large, bulky, crooked, pediatric, deviated and oblique are covered throughout the book. It contains over 2,000 full-colour surgical photographs of both rare and routine cases in Rhinoplasty with all aesthetic challenges examined in detail. The display of the pre- and post-operative photographs is made simple and easy for the eyes to see. Pre-operative photographic assessment, surgical planning and post-operative analysis is included in each case in an easy to follow format so that photographs and texts can be seen and read at a glance. A well-informed, clear guide is written at the beginning of the Atlas. Atlas of Clinical Cases in Rhinoplasty: Volume I is aimed at those who are planning to take Rhinoplasty as a career and experienced surgeons who wish to expand their knowledge and skills. It will be an essential resource for all those seeking a clear, highly visual guide to new developments in Rhinoplasty.

This atlas discusses more than ten common varieties of clinical presentations. Simple methods of handling revision, pediatric, ethnic, finesse and post-traumatic clinical cases are covered throughout the book. Distinction is made between the large nose and the bulky nose, and between the oblique nose, the deviated nose and the crooked nose. It contains over 4,600 full-colour surgical photographs of complex and routine cases in Rhinoplasty with all aesthetic challenges examined in detail.
