

Policy Sciences and the Human Dignity Gap

Problem Solving for Citizens and Leaders

This book presents a comprehensive and actionable framework for individuals and leaders seeking to promote human dignity within healthy environments. Rooted in the policy sciences approach, it equips readers with the essential concepts, tools, and skills necessary to address indignity and unhealthy conditions collectively. Despite international commitments and domestic laws advocating for human dignity, a glaring "human dignity gap" persists in numerous regions and problem contexts. This book sheds light on this disparity, examining its manifestations in global environmental change, development efforts, water insecurity, wildfires, human-wildlife conflict, access to public health, and much more. While existing scholarship often focuses on legal rights, the authors emphasize untapped opportunities for everyday citizens and leaders to foster human dignity within their communities and beyond. By offering fresh perspectives, practical concepts, and exercises, this book empowers readers to bridge the performance gap, ultimately enabling the realization of human dignity from the grassroots level. It provides innovative strategies and frameworks to address this pressing global issue, making it an invaluable resource for scholars, policymakers, and concerned citizens alike.
