Physical and Chemical Dissolution Front Instability in Porous Media

Theoretical Analyses and Computational Simulations

This monograph provides state-of-the-art theoretical and computational findings from investigations on physical and chemical dissolution front instability problems in porous media, based on the author's own work. Although numerical results are provided to complement theoretical ones, the focus of this monograph is on the theoretical aspects of the topic and those presented in this book are applicable to a wide range of scientific and engineering problems involving the instability of nonlinear dynamic systems. To appeal to a wider readership, common mathematical notations are used to derive the theoretical solutions. The book can be used either as a useful textbook for postgraduate students or as a valuable reference book for computational scientists, mathematicians, engineers and geoscientists.

Artikelnummer: 9783319384610

Medium: Buch

ISBN: 978-3-319-38461-0

Verlag: Springer International Publishing

Erscheinungstermin: 23.08.2016

Sprache(n): Englisch

Auflage: Softcover Nachdruck of the original 1. Auflage 2014

Serie: Lecture Notes in Earth System Sciences

Produktform: Kartoniert

Gewicht: 5621 g

Seiten: 354

Format (B x H): 155 x 235 mm
