

Part 1: Molten Salts and Ionic Liquids

Subvolume B: Electrical Conductivities and Equilibria of Electrochemical Systems -
Volume 9: Electrochemistry - Group IV: Physical Chemistry - Landolt-Börnstein New Series

Electrochemistry is the basis of many important and modern applications and scientific developments such as nanoscale machining, electrochemistry at the atomic scale, scanning tunneling microscopy, transformation of energy in biological cells, selective electrodes for the determination of ions, and new kinds of electrochemical cells, batteries and fuel cells. The present subvolume contains the related relevant data together with a precise description of the phenomena.
