Rhinitis: Immunopathology and Pharmacotherapy

Continuing the Respiratory Pharmacology and Pharmacotherapy series, this volume explores the pathophysiology and therapy of rhinitis. The volume is introduced by a chapter describing the normal anatomy and physiology of the nose and sinuses. Against this background the contributing authors describe and discuss the immunological and pathological changes which occur in rhinitis. The various causes and the types of rhinitis - such as allergic, vasomotor, and infectious - are discussed as are the treatments available (pharmacotherapy, immunotherapy, surgery). The book concludes with a description of the animal models of rhinitis which are now available. This book will be of interest to bench scientists and clinicians alike.
