## The Quality of Life in Contemporary China

---

This book introduces a multidimensional system that evaluates quality of life in China by pursuing a quantitative and analytical approach. A host of factors, including economic conditions and individual wellbeing, can affect people's satisfaction with their lives. In addition to GDP-associated indicators, sociological and environmental factors are also relevant when it comes to evaluating quality of life. Providing a general framework, while also considering gender, education and geographical differences in assessing quality of life, the book offers policy suggestions for improving both individual quality of life and the health of society as a whole.
